

# SECTION H

Acute Hospital Services

## SECTION H

### ACUTE HOSPITAL SERVICES

This chapter on Acute Hospital Services presents data under three separate headings:

In-Patient Care (Tables H1 to H53);

Hospital In-Patient Enquiry (Tables H54a, H54b and H55);

Out-Patient Care (Tables H56 to H57);

#### **In-Patient Care**

Table H1A-D relates to acute in-patient care by

Hospital Group for 2007-10. Table

H2A-D contains summary statistics for individual acute hospitals.

Detailed statistics by specialty for each hospital are given in Tables

H3 to H53\*.

#### **Definitions**

The following definitions apply to the tables on hospital in-patient statistics:-

**Average Number of In-Patient Beds Available:** This indicates by specialty the average number of beds that are available for use over the year, taking beds that have been temporarily closed or opened into account.

**Available Bed Days:** Given by specialty, this indicates the annual number of days that beds are available for use multiplied by the number of beds allocated to the specialty.

**Bed Days Used:** Measures total in-patient nights by specialty.

**% Occupancy:** The ratio of bed days used to available bed days by specialty.

In certain circumstances it is possible for occupancy to exceed 100% due to the rounding of average number of in-patient beds available on monthly returns from hospitals.

**Average Length of Stay:** Gives the average length of stay in days by specialty and is calculated as the ratio of bed days used to discharges/deaths.

\* There may be slight differences due to rounding between a hospital's summary and specialty statistics for the indicator 'Average Number of In-Patient Beds Available'.

Where a hospital only has a single specialty, a line for 'Hospital Total' would be redundant and is therefore not included.

Section H: Acute Hospital Services

**TABLE H1a  
ACUTE HOSPITAL SUMMARY STATISTICS BY REGION 2007**

Region	In-Patient Beds Available	In-Patients Discharged/Deaths	Available Bed Days	Length of Stay in Days	Day Cases
DUBLIN MIDLANDS HOSPITAL GROUP	1,702	98,781	619,447	5.5	69,786

### Hospital In-Patient Enquiry

The Hospital In-Patient Enquiry (HIPE) system, which is managed by the Economic and Social Research Institute, provides information on each hospital discharge. HIPE has covered close to 100% of the discharges from publicly funded acute hospitals in recent years. HIPE also includes two private hospitals, although these data have been excluded from the tables presented in this report. **Please note that the numbers of in-patients and daycases presented in the following HIPE tables may differ from those presented in the first part of Section H. These differences are due to certain activity which are excluded from HIPE but may still be reported by the HSE.**

HIPE data for 1994 to 2004 were classified using ICD-9-CM. All HIPE discharges from 2005 are now coded using ICD-10-AM (The Australian Modification of ICD-10 incorporating the Australian Classification of Health Interventions). This system includes significant changes in the classification of diagnoses and procedures. For more information on the introduction of ICD-10-AM see [http://www.esri.ie/health\\_information/hipe/clinical\\_coding/icd10am/](http://www.esri.ie/health_information/hipe/clinical_coding/icd10am/)

#### Tables H54A & H54B:

Tables H54A and H54B are based on HIPE data and show the number of inpatients and daycases broken down into Major Diagnostic Categories (MDCs) for 2009 and 2010. The average length of stay for inpatients is also included. The ICD-10-AM classification system includes a new grouper which is used to determine the MDC. This has resulted in some changes in MDC assignment. In particular, MDC 24 [Multiple Significant Trauma] and MDC 25 [HIV Infections] are now incorporated in other categories. This may make comparison of the current data with previously reported data based on ICD-9-CM MDCs difficult.

From 1st January 2006, the HIPE system includes data on daycase patients admitted for dialysis in dedicated dialysis units. These episodes were previously excluded from HIPE. These data are included in Tables H56A and H56B, and so the Kidney and Urinary Tract MDC shows a significant volume of daycases.

#### Figures H1 and H2:

The average length of stay for inpatients by age-group is displayed graphically in Figure H1 (2010 data). Note that daycases are excluded when calculating average length of stay. The number of inpatients and daycases for 1994-2010 is shown in Figure H2. Dialysis activity has been included as day case activity in HIPE since 2006. These cases have been excluded from this graph in order to provide a comparable trend.

#### Table H55:

Table H55 shows the number of daycases in 2010 broken down by principal procedure category. The table also shows the top 20 most common principal procedures, analysed at ICD-10-AM block level.

Note also that this table includes daycase dialysis patients.
